1. Claims 1-77 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter: the cited prior art fails to show a detection circuit, and associated method, for detecting data in a read data signal generated by a head of a perpendicular recording system, the read data signal including at least one of data and transients, a transient detect signal indicative of one of the transients, the detection circuit comprising a switch, controllable in response to the transient detect signal, to select either the first detected data signal when the transient detect signal indicates a transient is detected or the second detected data signal to a data processor when the transient detect signal does not indicate a transient is detected.
3. Claim 78 is missing.
4. The IDS has been considered. Gowda and Sugawara are cited as of interest.
5. The abstract of the disclosure is objected to because the abstract is too long. It must be equal to or less than 150 words in length. Correction is required. See MPEP § 608.01(b).

6. Claim 17 is objected to under 37 CFR 1.75 as being a substantial duplicate of claim 49. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

7. This application is in condition for allowance except for the following formal matters:

See paragraphs 3, 5, and 6.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.
